\langle Can I solve $Ax=b$ for every b ? \rangle

Do the linear combinations of the cols

fill 3-D space?

* When could it go wrong?

↳ if the columns of the matrix lie in the same plane

all the combinations lie in that plane

⇒ Singular, not invertible

* Matrix multiplication in column picture

$$Ax = b$$
$$\begin{bmatrix} 2 \\ 1 \end{bmatrix} \begin{bmatrix} -1 \\ 2 \end{bmatrix} \begin{bmatrix} 1 \\ 2 \end{bmatrix} = 1 \begin{bmatrix} 2 \\ 1 \end{bmatrix} + 2 \begin{bmatrix} -1 \\ 2 \end{bmatrix} = \begin{bmatrix} 0 \\ 5 \end{bmatrix}$$
